

CLAIMS

1. Mobile phone equipment, comprising:

5 a photographing unit (12) for converting incident light into an electric signal and outputting as image data;

a first image data storage unit (14) for temporarily storing a plurality of original image data obtained with a continuous photographing function of said photographing unit;

a display unit (17) for displaying said original image data; and

10 an image data playback unit (11) for continuously displaying on said display unit (17) the plurality of said original image data stored in said first image data storage unit (14).

2. The mobile phone equipment according to claim 1, further comprising

15 a thumbnail image data generation unit (11) for generating thumbnail image data from said original image data, wherein

on said display unit (17), an overview of said thumbnail image data of the plurality of original image data is displayed after the plurality of said original image data are obtained with the continuous photographing function of said photographing unit
20 (12).

3. The mobile phone equipment according to claim 2, further comprising

a second image data storage unit (15) for permanently storing image data, wherein

25 in the second image data storage unit (15), the plurality of said original image data obtained in single photographing through the continuous photographing function of said photographing unit (12) and said thumbnail image data are stored in an identical folder.

4. The mobile phone equipment according to claim 2, wherein
in said first image data storage unit (14), said original image data and said
thumbnail image data are temporarily stored.

5 5. The mobile phone equipment according to claim 4, further comprising
a second image data storage unit (15) for permanently storing image data,
wherein

in the second image data storage unit (15), the plurality of said original image
data obtained in single photographing through the continuous photographing function of
10 said photographing unit (12) and said thumbnail image data are stored in an identical
folder.

6. Mobile phone equipment, comprising:
a photographing unit (12) for converting incident light into an electric signal and
15 outputting as image data;

a thumbnail image data generation unit (11) for obtaining said image data as
original image data and generating thumbnail image data from the original image data;

a display unit (17) for displaying an overview of a plurality of thumbnail image
data generated from a plurality of original image data obtained by said photographing
20 unit through a continuous photographing function;

an image data storage unit (15) for storing said original image data and said
thumbnail image data in an identical folder; and

an image data playback unit (11) for reading said original image data from said
folder and continuously displaying on said display unit.

25

7. The mobile phone equipment according to claim 6, wherein
in said image data playback unit (11), the plurality of said original image data are
displayed on said display unit with a constant time interval.
